About Us

As a professional outdoor decking supplier, U-timber has three major production bases and 80 extrusion production lines. The biggest production base in Huzhou city covers an area of 40000 square meters and has basically achieved automated production. After more than 10 years of dedicated research and development in wood-plastic composite material products, we have achieved certain advantages. U-timber has thousands of different styles of molds and over 10 product quality system certifications to meet the diverse and personalized needs of our customers.

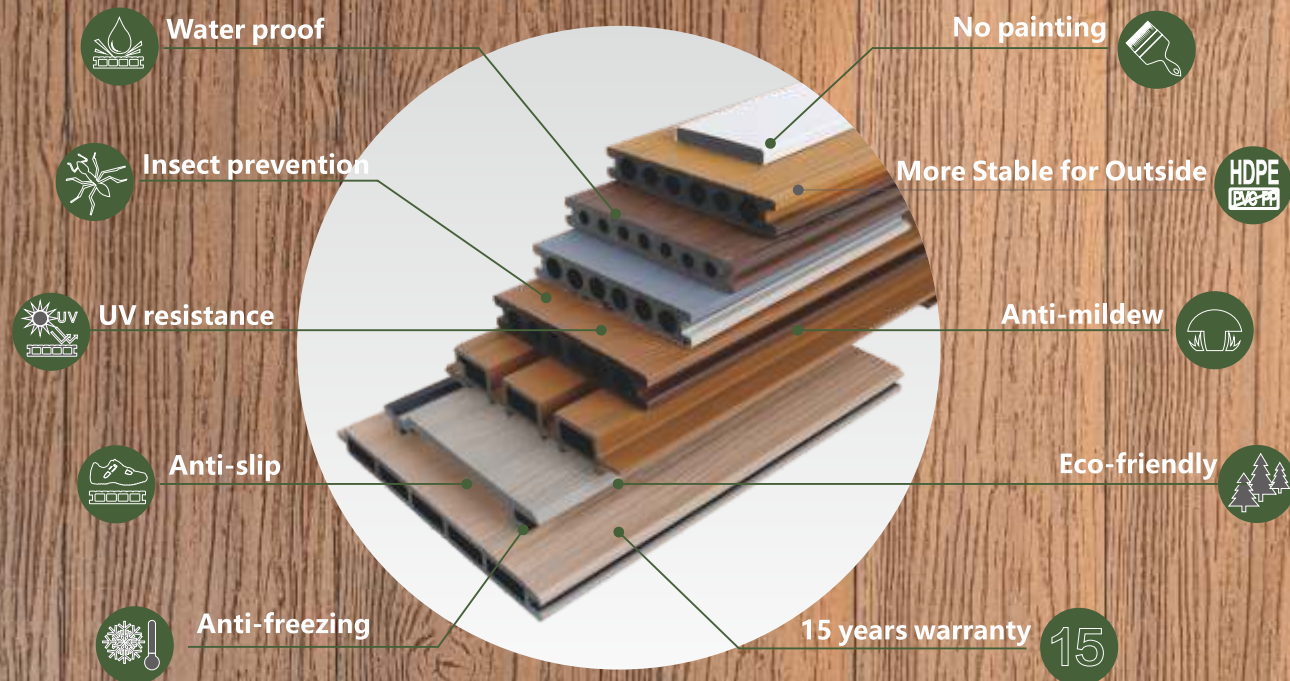

What Is U-timber

A good idea for saving forest resources. U-timber is made from carefully selected recycled wood fibers and plastic. As an alternative material for wood, U-timber has a better strength and durability.

A perfect product for outdoor life. You can decorate your house and garden with U-timber wall cladding, railing and decking. That's your best moments outside which happens on U-timber.

An excellent team full of passion. Everyone enjoy the life in U-timber.

CO-EXTRUSION SERIES

Co-extrusion U-timber is the second generation of WPC, which is uniformly and firmly covered with protective layer of polymer material around. The protective layer and core layer are successfully extruded under high temperature without adhesive. The inner material is made of high density polyethylene (HDPE) and good quality wood fiber, which is more durable and recyclable. The protective layer adopts advanced macromolecular engineering materials with advanced technology, unique formula and durability.

Colors

Research and Development

With co-extruding and covering techniques, the surface of the product cannot be easily scratched. The inner core is still made by extruded wood plastic composite with high density. This product is especially favored by North America market.
